

Caring for young lives

Children's Liver Disease Foundation

11 November 2008

Children's Liver Disease Foundation (CLDF) notes the article in the Observer newspaper dated 9 November 2008 and the draft report on Paediatric Tertiary Services at Birmingham Children's Hospital commissioned by the NHS Primary Care Trusts in Birmingham.

Catherine Arkley, chief executive of Children's Liver Disease Foundation, the UK's leading organisation dedicated to fighting all liver diseases of childhood, said:

"We are disturbed by the draft report and the article in the Observer of 9 November 2008, of which we were completely unaware, and which highlights some potentially very serious issues relating to the care and treatment of gravely ill children with life-threatening liver disease.

"It is particularly worrying to hear that children with biliary atresia, a very serious disease for which timeliness of treatment is critical, are on occasion being transferred to Leeds because of a lack of resources in Birmingham, one of the country's three key treatment centres for this disease as designated by the Department of Health.

"It is very upsetting for us to learn in the draft report that consultants within the hospital's liver unit appear to be concerned about the level of service support available to help these children and their families.

Caring for young lives

Children's Liver Disease Foundation

"Without exception, the staff with whom the Foundation comes into contact in the liver unit at Birmingham Children's Hospital are incredibly skilled, dedicated and highly motivated individuals.

"The Birmingham Children's Hospital liver unit is one of three centres within a national specialist service and it is important that the hospital management recognises that fact.

"We note that the Secretary of State for Health has asked the Healthcare Commission to investigate the issues raised and we await its report with interest."

Note to editors

Formed in 1980, Children's Liver Disease Foundation (CLDF) is a unique national charity dedicated to fighting all liver diseases of childhood.

CLDF has three core areas of activity: it is the lead charity supporting medical research into all aspects of children's liver diseases, acts as a comprehensive information hub for healthcare professionals and the general public and provides a tailored support service for young people with liver disease and their families.

For further information please visit www.childliverdisease.org or call 0121 212 3839.

Formed in 1980, Children's Liver Disease Foundation (CLDF) is a unique national charity dedicated to fighting all liver diseases of childhood.

CLDF has three core areas of activity: it is the lead charity supporting medical research into all aspects of children's liver diseases, acts as a comprehensive information hub for healthcare professionals and the general public and provides a tailored support service for young people with liver disease and their families.

For further information please visit www.childliverdisease.org or call 0121 212 3839.

Caring for young lives

Children's Liver Disease Foundation

11 November 2008

Children's Liver Disease Foundation (CLDF) notes the article in the Observer newspaper dated 9 November 2008 and the draft report on Paediatric Tertiary Services at Birmingham Children's Hospital commissioned by the NHS Primary Care Trusts in Birmingham.

Catherine Arkley, chief executive of Children's Liver Disease Foundation, the UK's leading organisation dedicated to fighting all liver diseases of childhood, said:

"We are disturbed by the draft report and the article in the Observer of 9 November 2008, of which we were completely unaware, and which highlights some potentially very serious issues relating to the care and treatment of gravely ill children with life-threatening liver disease.

"It is particularly worrying to hear that children with biliary atresia, a very serious disease for which timeliness of treatment is critical, are on occasion being transferred to Leeds because of a lack of resources in Birmingham, one of the country's three key treatment centres for this disease as designated by the Department of Health.

"It is very upsetting for us to learn in the draft report that consultants within the hospital's liver unit appear to be concerned about the level of service support available to help these children and their families.

Caring for young lives

Children's Liver Disease Foundation

"Without exception, the staff with whom the Foundation comes into contact in the liver unit at Birmingham Children's Hospital are incredibly skilled, dedicated and highly motivated individuals.

"The Birmingham Children's Hospital liver unit is one of three centres within a national specialist service and it is important that the hospital management recognises that fact.

"We note that the Secretary of State for Health has asked the Healthcare Commission to investigate the issues raised and we await its report with interest."
